Description

As you can see from the before and after photo's the transformation from before to after.

Old existing timber bin stores had asbestos and were rotten.

The bin stores could not be knocked down and rebuilt due to gas, electric and water services.

Only the rotten timber and asbestos was removed and then the bin store was cladded with GRP doors, GRP frame, GRP tongue and grove cladding and a new one piece canopy roof.

This product is only cost effective on 10 properties and above.
